

# Welcome to the Training *Power BI Desktop*

## The webcast series consists of two parts:

- In the **first part**, you will get an overview on how Power BI Desktop is used at Munich Re and how you can use the tool. As a quickstart, you will learn how to create and publish a report to the Power BI services and how to create dashboards from your data.
- The **second part** gives you a more detailed insight of the preparation of your data. You import & clean your data with queries. You get to know the data model of Power BI Desktop & create a data model with further calculations (DAX).
- Participants should be familiar with techniques for handling large amounts of data efficiently and can minimize storage issues with Excel 2013. They should know the basic use of Pivot tables, Power Query, Power Pivot & Power View to provide, manage & present data.

### !! PBID\_Exercises

- Please unzip the exercise folder & copy the content to the desktop
- In this folder you will find all the files you need for both webcast parts
- To participate in the exercises, a printout of the handouts is recommended
